L3 Physique

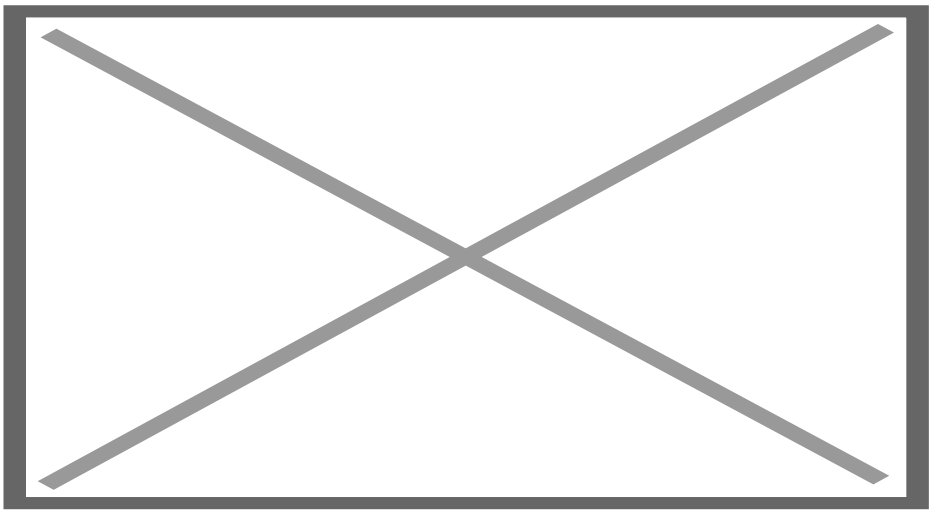

Licence (Undergraduate programme)
Specialisation Physique
Enrolment type
Formation initiale
Formation continue
Language(s) of instruction
French

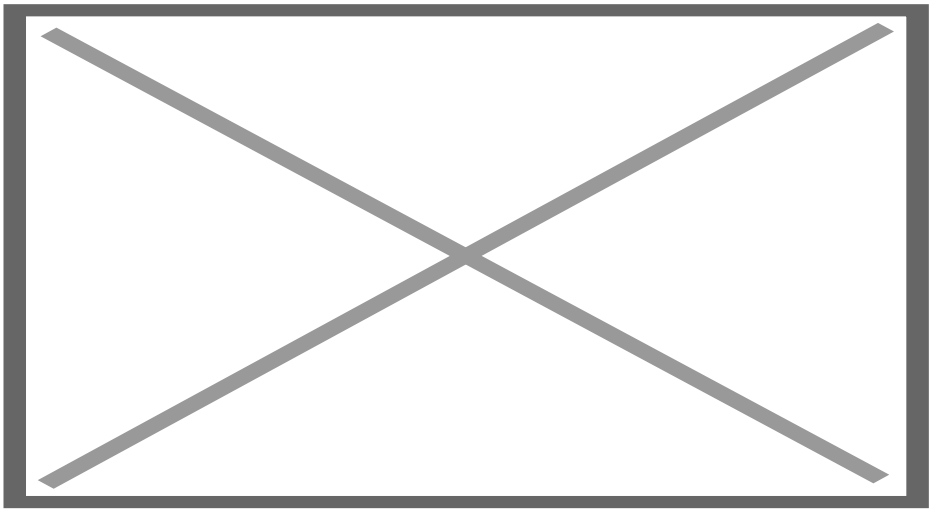

The third year of the Bachelor's degree in Physics at the Faculty of Sciences of Paris Saclay University (L3 Physics) is a generalist course, ranging from fundamental physics to applications in many fields. It provides the broadest possible access to various Master's degrees in Physics and admission on the basis of qualifications to the first year of many engineering schools.

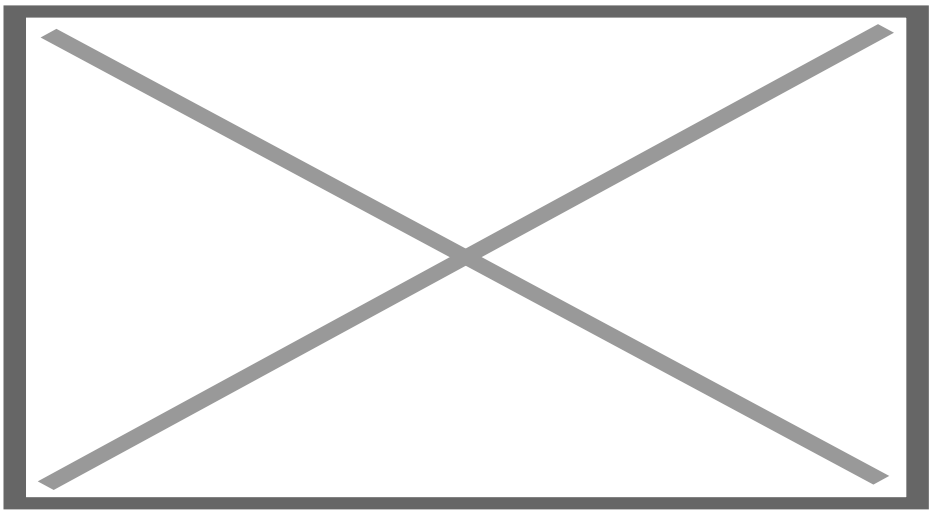

The content of this programme is balanced between:

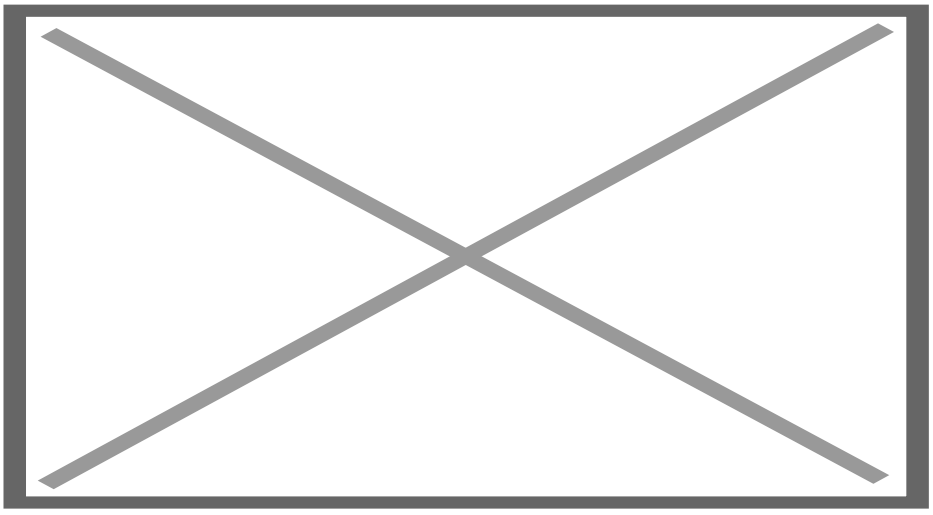

- **compulsory courses** enabling students to acquire knowledge in fundamental and applied physics
- **optional courses** partly shared with other courses in the Physics Bachelor's degree, offering an introduction to or in-depth study of topics in fundamental or applied physics or cross-disciplinary subjects
- **cross-disciplinary courses** : mathematical and computer tools, study of one or more foreign languages.

Présentation

Skills

All students who have completed a bachelor's degree in physics acquire skills specific to the discipline as well as cross-disciplinary skills. The skills and abilities targeted by the degree are:

- Mastering the formal and practical knowledge of the discipline
- Proposing analogies, making estimates of orders of magnitude
- Knowing how to choose the theoretical, numerical or experimental tools to use
- Analysing, modelling and solving simple problems
- Mastering the mathematics used in problem modelling
- Knowing how to process numerical data and acquiring digital programming skills
- Writing a summary report and giving an oral presentation in French and English
- Carrying out a team project
- Being aware of the interactions between scientific knowledge and society
- Building and establishing a career plan

Objectives

The L3 Physics programme enables students to acquire a solid general scientific background in the various fields of physics (mechanics, optics, electromagnetism, thermodynamics, quantum and statistical physics, etc.), as well as in mathematics and computer programming.
Optional courses offered in both semesters allow students to explore more specific areas and help them to

refine their focus for master's programmes and engineering schools.

Débouchés

Career prospects

After a Master's or Master's + PhD: engineer (R&D, control, production, etc.)
After a Master's or Master's + PhD: researcher or lecturer
After a Master's or Master's + PhD: engineer (research and development, control, production, etc.) in the fields of health, pharmaceuticals, agri-food, biotechnologies, instruments and reagents, cosmetics, pollution control and the environment.
After a Master's + PhD: researcher or lecturer
After a Master's or Master's + PhD: engineer (Research & Development, control, production, etc.)
After a Master’s degree: Engineer (financial analyst, economist, statistician)
After Master and PhD : reseacher or assistant professor or professor

Further Study Opportunities

Master of Education and Teaching Professions
Engineering school
Master of applied physics
Master’s Degree in Engineering or Mechanical Engineering

Calendar
